

METAMOB
passion for bandsaw blades

about Metamob

We are one of the leading manufacturers of saw blades and frame saw blades in Europe. Since the first blade sold to our clients in 1994, we've continuously worked to adapt our products and services to the fast-paced industry. We developed our own national distribution network and started providing after-sales maintenance services and technical assistance for all the offered blades.

We are defined by:

A high quality of
services and products
at a fair price

Reliability

Trustworthiness

Deliveries at agreed
deadlines

An excellent ability to meet
specific customer needs.

what makes us **Different?**

Customized products

Each company we work with is unique, which determined us to develop the broadest offer of blades in Europe and one of the most flexible production lines for further customization.

Products quality

Quality is one of the key criteria when buying a product. We combine efficient equipment, skilled employees, and a bespoke management system to ensure a pleasant experience for any customer.

Diverse transport solutions

You'll receive the products as soon as possible, with the suitable transport option: Metamob routes, private delivery cars, or personal pick from the Metamob showroom in Satu Mare.

Specialized advice

Any business' efficiency and tools lifetime rely on their correct use. Our specialists make sure that you benefit from their entire potential through technical assistance and the best advice in these areas.

Research and innovation partners

Our technology and information systems allow us to monitor your blade lifetime and its performance curve. All these insights will help you develop your business even more.

Your choice

We take into consideration any feedback, comment, and referral, and do our best to turn them into future solutions for our clients and partners.

Products and Services

Products

METABLADE

Performance in cutting with universal blades

METAPREMIUM

Performant cutting for high demands

METAPRECISION

Guaranteed precision in cutting

METAFORCE

Fast and durable cutting

METGOLD

Bandsaw blades for mobile milling machines

METAMOTION

Efficient cutting with a smart blade

performance in cutting with universal blades

- Ensures greater productivity
- High durability and long cutting time (the material keeps its tensioning and cutting edge for a longer period)
- Easy maintenance thanks to the materials' good behavior under the process of swaging and tensioning
- Fair quality-price balance

Available blade width - from 60 mm to 260,4 mm

Available blade thickness - from 0.9 mm to 1.65 mm

performant cutting for high demands

- Ensures a high productivity
- High durability (longer cutting time between two sharpenings)
- High resistance (thanks to its high content of Ni, it has a higher resistance for repetitive bonding on the flywheel without cracking)
- The bandsaw blade keeps its tensioning during the cutting
- Lower sensibility to the technical condition of the sawing machines

Available blade width - from 60 mm to 311 mm

Available blade thickness - from 0.9 mm to 1.82 mm

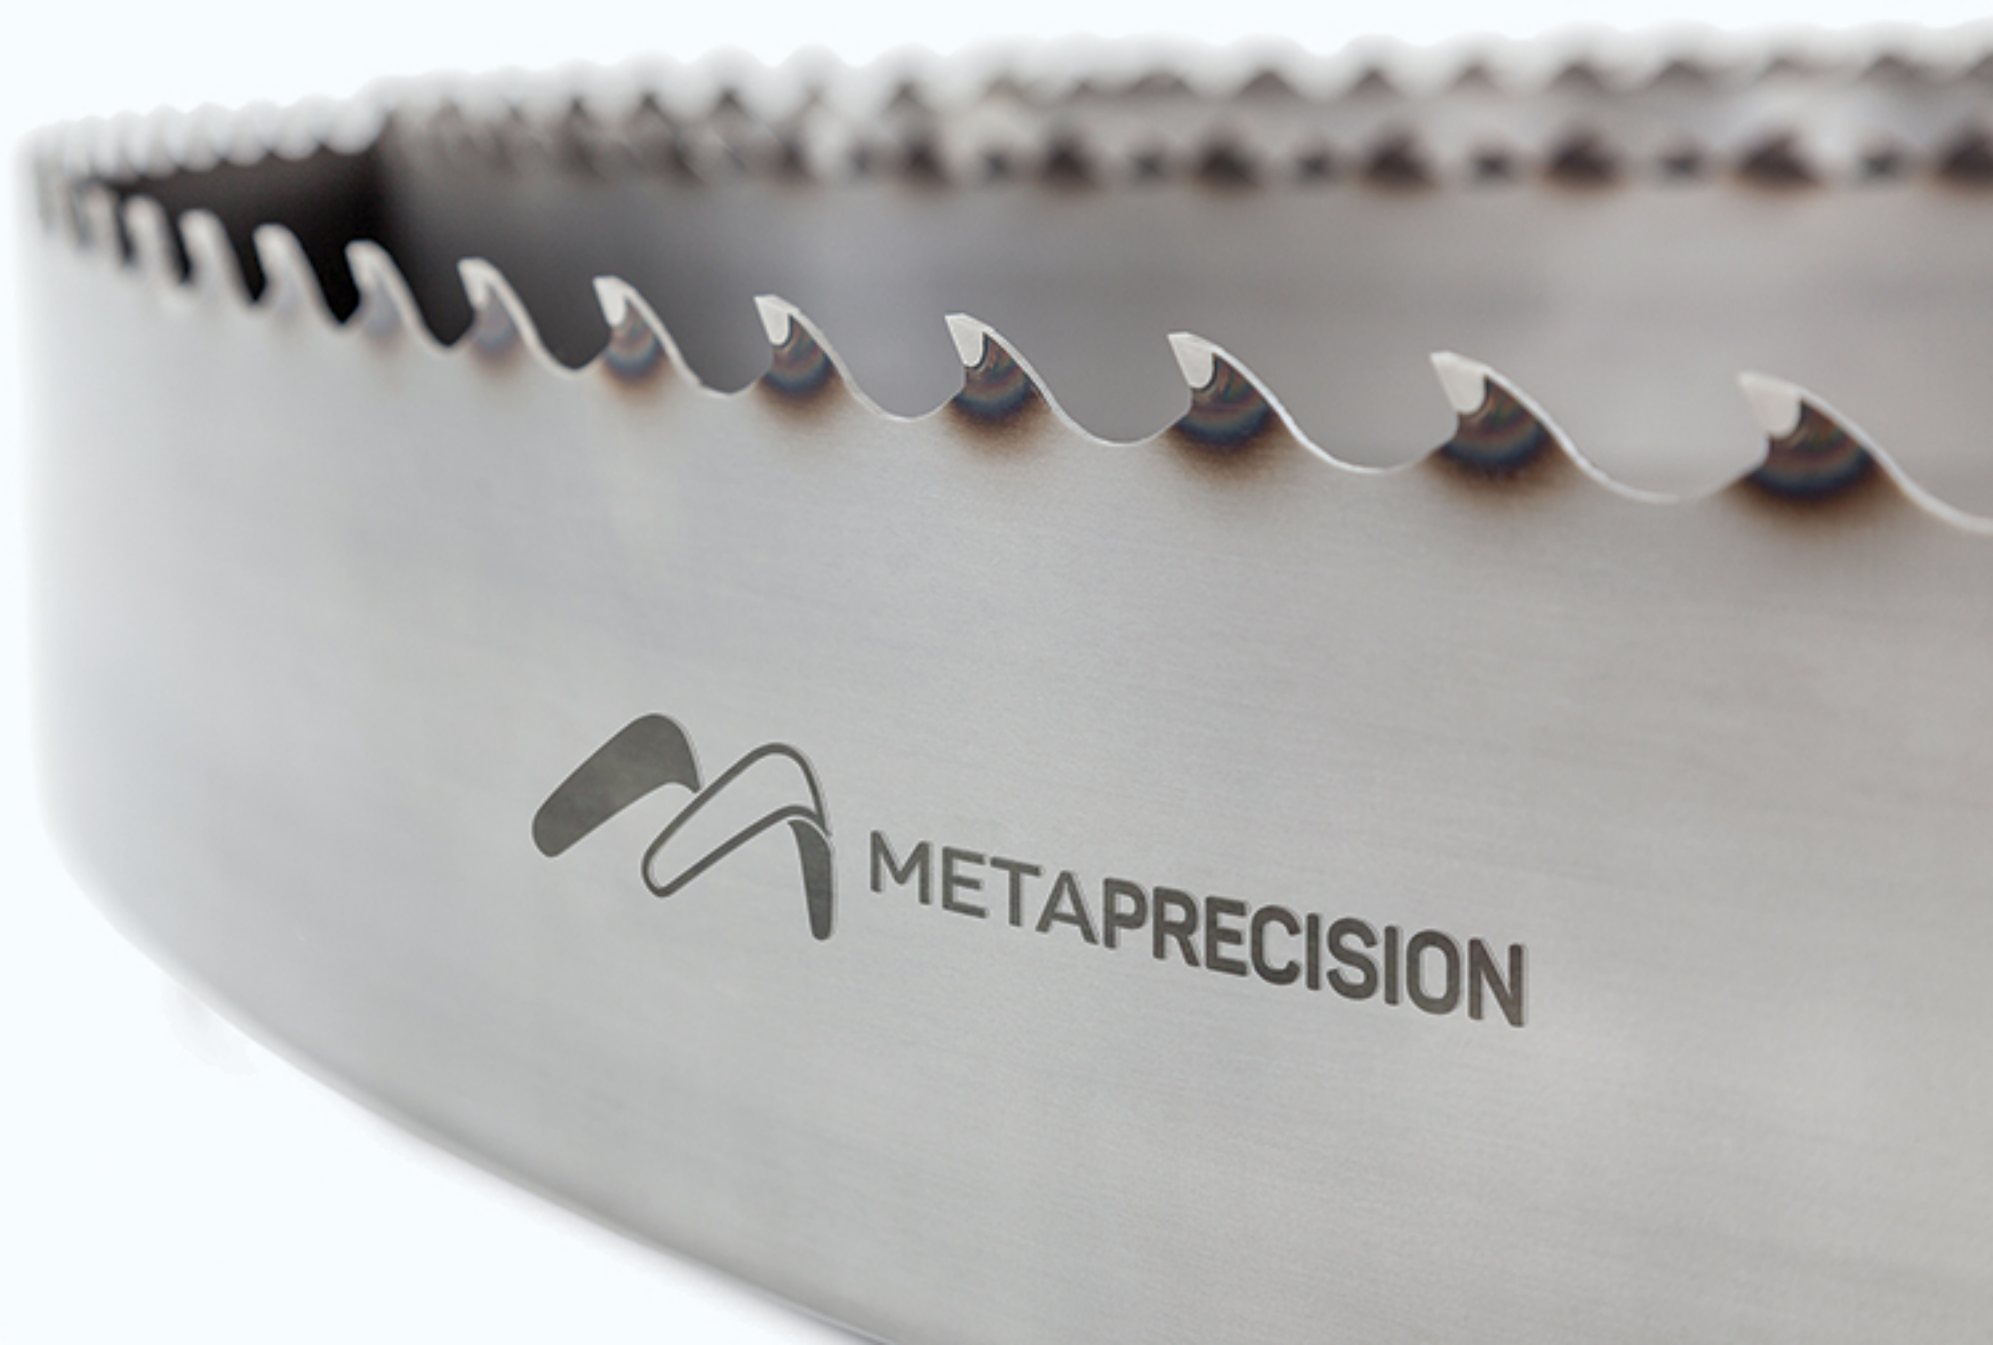

METAPRECISION

guaranteed precision in cutting

- Bandsaw blades designed for woodworking and timber factories
- Allows the cut of quality veneer and wood slides with precision and efficiency
- Ensures a highly precise cutting with minimum loss of material (the high precision technology used in the production makes it ideal for cutting valuable wood)
- Guaranteed straight cutting with no fine cracks.

Available blade width - from 60 mm to 311 mm

Available blade thickness - from 0.8 mm to 1.83 mm

fast and durable cutting

- Increased cutting speed and blade lifetime by up to 150%
- It can enhance machine performance
- A high-quality cutting (straight cut, fine wood surface after cut, efficient sawdust removal)
- Faster ROI thanks to the durable blades
- No additional costs for maintenance

Available blade width - from 155,6 mm to 260,4 mm

Available blade thickness - from 1.47 mm to 1.83 mm

bandsaw blades for mobile milling machines

- Excellent bandsaw blades for mobile milling machines used to cut wood in planks and logs into timber
- Higher durability (the blades have heat-treated teeth)
- Reduced roughness (the stellite-tipped blades make the final surface almost as smooth as a planned surface).

Available blade width - from 33 mm to 80 mm

Available blade thickness - from 0.8 mm to 1.1 mm

efficient cutting with a smart blade

- Meta Motion is a group of circular blades with a long life cycle and extremely durable.
- The products were designed for cutting hardwood, wood panels and aluminum profiles
- The blades are efficiently used for edging operations, resawing, cross-cutting or cutting on different angles
- Being carbide tipped (TCT) the blades' lifetime increases

Available blades:

Circular saw blades for longitudinal cutting (simple or with chip limiters)

Circular saw blades for multiple blade machines

Circular saw blades with alternative or trapezoidal teeth

Universal circular saw blades

for bandsaw
blades

Services

Besides the high-quality products we design and offer to clients all around the world, we make sure that the user experience is excellent both before and after the selling process. For this purpose, we provide a series of services:

Technical assistance

- Blades check
- Machines check
- Custom recommendations

Full maintenance of saw blades

- Blade quality check
- Blade preparation check

Tensioning

- Blade cleaning and tensioning
- Efficiency check

Welding

- As part of the building process of new blades
- For used blades and bimetallic saw blades

Levelling

Removal of local blades defects
(concave or convex deformations)
Special ruler check

Saw setting

Spring setting
Swage setting

Tothing

Wide range of tooth shapes
Various pitch values

Sharpening

Tooth shape maintenance
Full capacity restoration (for used blades)

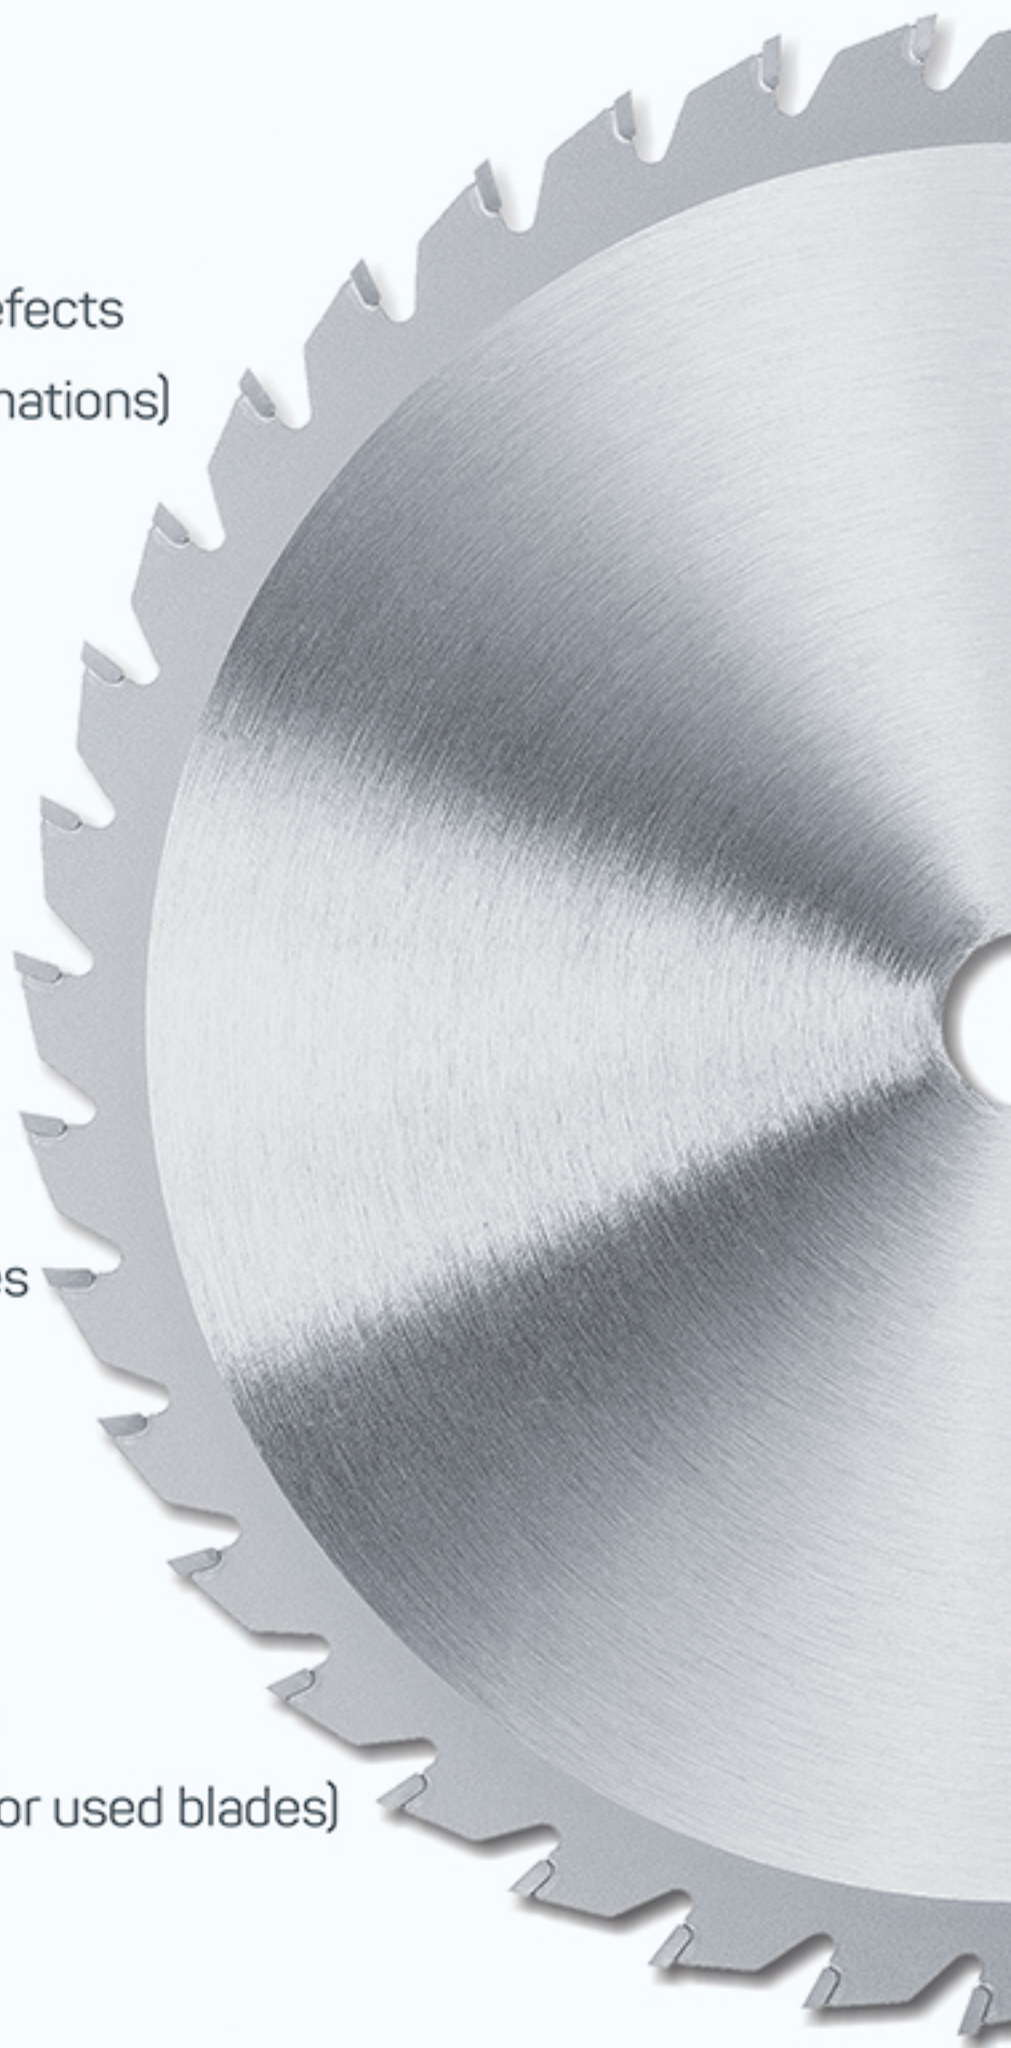

Hardening

Increasing durability
Maintenance of the blade's body in its initial shape

Stellite-tipping

Increasing resistance
Ensuring smoother cutting surface

environmental Policy

We all know that the wood is 100% natural and has been used by humankind for tens of thousands of years for numerous applications.

Metamob supports the processing of logs originating from forests where the forest management system was implemented, and cutting and reforestation of trees are under control. At the same time, we support the wood recycling. For example, the beams and boards of a building can be reused in a new building, if the condition of wood allows it. If not, it can produce thermal energy by burning.

We believe that if the wood is correctly exploited, it can become very ecological.

We also know that solar energy has the least negative impact on the environment compared to any other energy source. It does not produce greenhouse gases and does not pollute the water.

Meatmob sustains a clean environment, and we have chosen to use solar panels mounted on the roof of our factory.

Testimonials

In Metamob company, we have finally discovered a trustworthy supplier with qualitative products. Delivery deadlines have always been respected. The blades are first class, perfectly planned, and tensioned. We are fully satisfied. In this way, we can subsequently supply our clients with qualitative products.

Toni Braunwalder - Administrator at Braumwalder Mobil Sagerei Ag / Switzerland

The new blades fit very well, and the cut is incredible. We have a higher yield and save time because we only have to sand pieces now instead of planing as well.

Jayson Carlson - President at Carlston Crafted LLC Utah / USA

The best three words to describe Metamob are seriosity, professionalism, collaborative abilities. We talk about an old collaboration; we know the quality of the products and the way in which they transform raw materials into useful woodworking tools. We appreciate the quality of the personnel.

RG Holz Industrie SRL - Romania

we bring the blade, you skyrocket your business!
