preparation

high speed
cutting

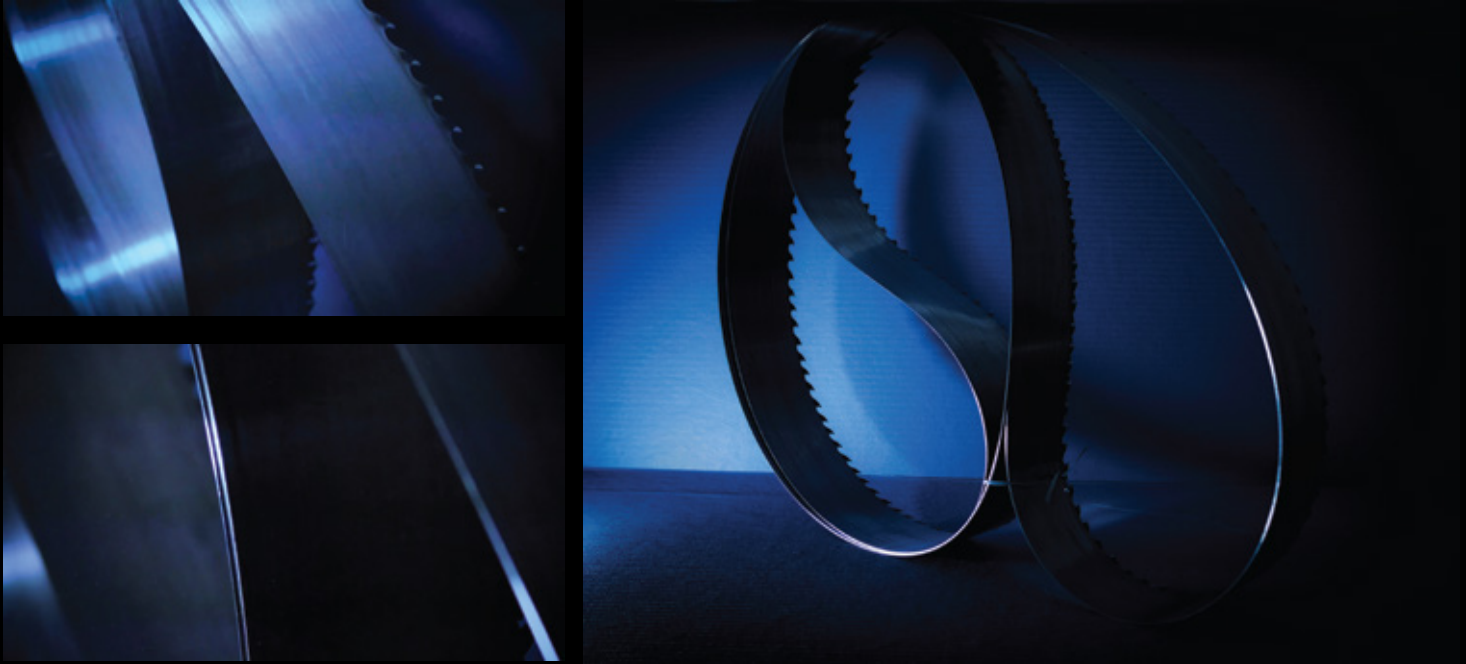

all
season

all types of
wood

Choosing these blades is recommended for powerful and performant machines where the production flow allows increasing the capacity, as well as for fully automated lines.

Benefits:

- offers a significant increase of the cutting speed
- enables the high-performance use of the machine
- ensures a superior surface quality
 1. straight cutting
 2. smoother surface of the sawn wood
 3. improved sawdust elimination
- shorter damping time of the initial investment in blades and their maintenance
- does not require an investment in sharpening machines and labour costs for maintaining the blades

Drawbacks:

- a greater initial investment (at least 3 sets of blades)
- maintenance exclusively performed by Metamob
- requires operating in compliance with the recommended cutting speeds

Tehnical data:

Width	Thickness
155.6	1.47
181	1.47
206.4	1.47
	1.65
231.8	1.65
260.4	1.65
311.2	1.83
	2.00

Note: we can offer any intermediary widths between ~ 155 and 311 mm, the optimal width of the blade will be chosen according to the size of the customer's machine.
