

Efficient cutting with a smart blade

carbide tipped
(TCT)

high durability

precision
in cutting

Group of circular blades with long life cycle and extremely durable. Contains products made for cutting hard wood, wood panels and aluminium profiles. Dedicated for professional use, the products are available for different needs.

- used for edging operations, resawing, cross-cutting or cutting on different angles
- being carbide tipped (TCT), the period between two sharpening increases

Choose the right blade

Circular saw blades for multiple blade machines

Are used on special machine tools that work with multiple blade equipped shafts. Working shafts are provided with three or more blades.

Circular saw blades for longitudinal cutting

Are used for timber edging operations, splitting and cutting planks along fibers in semifinished products.

Circular saw blades for longitudinal cutting with chip limiters

Are used for lengthwise cutting of soft coniferous and deciduous timber.

Universal circular saw blades

Are used for lengthwise or crosswise cutting of hard wood, chip boards or MDF panels, processed individually.

Circular saw blades with alternative teeth

Are used for the cutting in desired forms of plywood, raw or veneer / plastic-coated chipboards or solid wood. Their use ensures a smooth final surface of the cut.

Circular saw blades with trapezoidal teeth

Are used for cutting hard wood in semifinished furniture products at the required final dimensions, as well as for the cutting of light metal profiles, tubes and pipes.
